
peoplesoft installation

Posted by sri - 2008/12/17 13:50

I am trying to install peoplesoft 9.0 ..

I installed all the required software into my system.datamover part is over.After that when I try to log in to app designer it is throwing me the error (Invalid username and password).Could you please let me out in tracing what would be the problem.

First try to login to using Datamover in bootstrap mode which is SYSADM/PASSWORD. If you are able to login then there is no issue with the DATABASE USER ACCESS. If not then change the database password for SYSADM from database and try the above step again.

Second try using VP1 or PS it it does not work, then login to data mover in bootstrap mode and run this to the actual password for SYSADM.

```
CHANGE_ACCESS_PASSWORD SYSADM1 YOURPASSWORD;
```

Then logout and login using VP1/PS.If you still have problem, then login to data mover in bootstrap mode again and run this command:

```
update PSOPRDEFN set OPERPSWD = 'VP1', ACCTLOCK = 0, ENCRYPTED = 0
where OPRID = 'VP1';
ENCRYPT_PASSWORD VP1;
commit;
```

YOU SHOULD BE ABLE TO LOGIN NOW.

If not then the INSTALLATION IS NOT GOOD, CLEAN THE DATABASE and run all the datamover scripts for creating the database.

=====

Re:peoplesoft installation

Posted by sri - 2008/12/18 06:29

Thanks for your prompt response.I can login to datamover in bootstrap mode by using sysadm .Even I can login through VP1 also.I went through the database setup in datamover and ran the scripts.When I come to next step like login to the Application designer

I am getting an error .(Here i tried to login by using sysadm,VP1). <http://psadmin.org/images/fbfiles/files/ERROR.doc>

Re:peoplesoft installation

Posted by PSADMIN - 2008/12/20 09:27

Looks like the tools installation did not go well. You need to drop user and created the user again and go through the installation document.

It is better to create the database manually . This way the chances of running into some error and missing some important table.

Also make sure to provide unlimited tablespace limit to expand while installing. Check the disk space while installing so that it does not error out.

Create as large as possible PSTEMP tablespace also before installing.

Good Luck.

Hi,

I created the database manually as you said by looking at "create database manually in windows". But when I try to execute the utlspace.sql. It is giving me an stating that cannot create tablespace "psdefault" It reaches the maximum 4GB limit.I am using oracle 10g express edition .My question is I can't use oracle express edition for my peoplesoft installation or I need to change something else to do the same.

thanks

Re:peoplesoft installation

Posted by PSADMIN - 2009/01/13 07:40

Yes, you can NOT use Oracle Express Edition for PeopleSoft. If you are using this for learning purpose and not for production, you can download from the e-delivery site the oracle Enterprise or Standard Edition.

Also note that you should check the correct oracle version compatible to the People Tools version and Operating system you are installing in the installation document.

Re:peoplesoft installation

Posted by sri - 2009/01/13 18:38

Hi,

Thankyou very much for your prompt response.

I am little bit confused about your second paragraph.

I am trying to install peoplesoft 9.0 with peopletools 8.49 for windows for that oracle 10g version(enterprise) is ok .

when I go to edelivery and select the product name as oracle database and windows 32 bit.

from that I can select the below mentioned one and I am sorry if this is a silly question.

can you use this (Oracle® Database 10g Release 2 (10.2.0.1.0) Media Pack (with Oracle® Enterprise Manager 10g Release 4 Grid Control, Oracle® Secure Backup Release 10.1.0.3.0 and Oracle® Warehouse Builder 10g Release 2) for Microsoft Windows (32-bit)

=====

Re:peoplesoft installation

Posted by PSADMIN - 2009/01/13 18:42

Oracle® Database 10g Release 2 (10.2.0.1.0) Media Pack should be fine. Other tools like Enterprise manager or Warehouse builder are not required.

Re:peoplesoft installation

Posted by sri - 2009/01/26 14:25

Hi,

I used Oracle Database 10g Enterprise Edition Release 10.2.0.1.0 - Production

Created database manually and then all executed alall scripts. And I logged to the data mover in bootstrap mode and ran the scripts.And it was showing sucessful completion.

Simply ran this query:

select count(*), object_type from user_objects group by object_type;

COUNT(*) OBJECT_TYPE

5 TRIGGER
1792 TABLE
2208 INDEX
1331 VIEW

After that I tried to config,create,launch the app server

I created a domain and it said domain config complete.after that I tried to boot the same and it is throwing the error.

PSADMIN.4676 (0) (0) Begin boot attempt on domain FDEVELOC
PSWATCHSRV.320 (0) Checking process status every 120 seconds

PSWATCHSRV.320 (0) Server started
PSAPPSRV.3060 (0) (0) PeopleTools Release 8.49 (WinX86) start
ing
PSAPPSRV.3060 (0) (0) Cache Directory being used: D:\peoplesoft\BIN\appserv\FDEVELOC\CACHE\PSAPPSRV_2\
PSAPPSRV.3060 (0) (1) GenMessageBox(0, 0, M): Database Signon
: Invalid user ID or password for database signon. (id=PS)
PSAPPSRV.3060 (0) (0) Server failed to start
PSWATCHSRV.320 (0) Shutting down
PSADMIN.4676 (0) (0) End boot attempt on domain FDEVELOC

could you please help me out.

Thanks,
Sri

Are you able to login using App Designer? IF yes what user id you are using and what user id you are using to start the app servers?

Re:peoplesoft installation

Posted by sri - 2009/01/27 15:10

Hi,

I created ,configured the app server by using PSADMIN.

By using user id as :PSADMIN I can able to create and config a app server.

And I used this id(PSADMIN) to login to app designer.But it is not working with VP1 or PS.

Re:peoplesoft installation

Posted by PSADMIN - 2009/01/27 15:24

How you were able to create the user id PSADMIN where you are not able to login in PIA. Also you should start the App Servers using VP1 or PS as this is the user id which has permissions to start and start the App servers.

Please check on that why you are not able to use these two user ids. The user id PSADMIN may not have permission to start the app server. Check on the permissions for this user id.

Re:peoplesoft installation

Posted by sri - 2009/01/28 16:22

Hi,

I tried to create,config and start the app server and I got this error message
"Database Signon
: Invalid user ID or password for database signon. (id=PS)"

After that I checked in PSOPRDEFN table and find out these entries.

OPRID

PSADMIN

PTADMIN

PTDMO

PTPORTAL

PTSECADM

PTTOOLS

PTWEBSERVER

So I used PSADMIN to create,config and start the app server.This time I didnt get that error message.And when I try to boot the domain 11 process has started.

Next I tried login to Application Designer using PSADMIN which is allowing me(but not with VP1 or PS)

Next I tried to login to peoplesoft sign on page using PSADMIN which is allowing me(but not with VP1 or PS)

After that I tried to config the process scheduler with PSADMIN but no success.

All these things I have done before getting ur reply.And from ur reply I found that I need to do with VP1 or PS.

So I am just wondering is there a way to find out why my VP1 or PS entry is not there in PSOPRDEFN table.

You should have Roles to VP1 or PS. Mostly if it is Finance/CRM it should be VP1 and for HRMS it should PS. Check and compare the roles between VP1/PS and PSADMIN, if you have that user id already.

Try to give "PeopleSoft Administrator" and "ProcessSchedulerAdmin" roles to the user id.

Also post what are the roles that VP1/PS has and PSADMIN has if you still have problem.

=====

Re:peoplesoft installation

Posted by sri - 2009/02/04 13:44

There is no user like VP1 OR PS when I review the page user profiles.

After seeing your reply I added processscheduler admin role to the user PSADMIN and I tried starting the process scheduler. And I can start the process scheduler process now.

I hereby attached a screenshot. Please review the same. In that for application release: peopletools(Just wondering why It is not showing peoplesoft Guessing might be something I missed in installation that is the reason I am not having any user id like VP1 or PS

Re:peoplesoft installation

Posted by PSADMIN - 2009/02/05 07:40

Normally if you install DEMO, it should have either VP1 or PS user id and also many other user ids for checking the functionalities by logging into PIA with different user ids.

If you checked DEMO database while installing and still not there then there is something wrong with the installation.

Check the logs. I understand you are able to start PS and APP servers after adding the roles.

Cheers.

Re:peoplesoft installation

Posted by sri - 2009/02/05 08:22

Hi,

Thanks for your reply.

While I configured the database I selected System instead of demo.

And one more thing I chose the option PeopleTools System database. This was the only option I got for selecting the PeopleSoft Application.

Now I found out that I didn't create the application database. So I installed the application (-finance) in my PS_home directory. (might be this may be the reason for no VP1 or PS user id.)

And from your reply I understood that I selected system instead of demo and another mistake I didn't install the application.

Is there any way to do the same at this point or I should start from the stretch from createdb scripts

Thanks

Re:peoplesoft installation

Posted by PSADMIN - 2009/02/08 11:47

If you are going to use it learn about the features with some data, you need to reinstall with the DEMO option.

If you already know the features and want to use it for other purposes like testing the features or importing data from legacy system or want to enter data from scratch manually "SYSTEM" should be fine.

Depending on your requirement, you can decide on what to do.

In any case, it is good to have a demo instance running to see how the delivered code works for each version of Tools and Application you have running in your company or client.

Cheers

Re:peoplesoft installation

Posted by sri - 2009/02/12 08:02

Hi,

Thanks for your response.I need this for learning purpose.So I understood that I need demo database. So I need to start from the stretch like installing oracle and select demo database in that or I can login to datamover and select demo database and run the script again.

And one more question how much memory space is needed to run epddl.sql(finance) script.

Thanks

Re:peoplesoft installation

Posted by PSADMIN - 2009/02/12 13:09

The space requirements needed for each application is provided in the installation document itself.

Re:peoplesoft installation

Posted by sri - 2009/02/13 04:24

Ya yesterday I read the documents and find out that I need 110 gb.

Re:peoplesoft installation

Posted by PSADMIN - 2009/02/13 08:22

If you are trying to use non-unicode database then it will take lots of space. Try unicode and you might be able to install in lesser space.

Best of luck

Hi all. My home is not a place, it is people.

I am from Bahrain and also now'm speaking English, please tell me right I wrote the following sentence: "If you are in debt and need help eliminating it, this article reviews the option of free credit counseling services."

Regards :o Mace.

Re:peoplesoft installation

Posted by Rahul - 2010/06/12 07:11

Hi

In order to install PeopleSoft pls follow the the below mentioned Steps preferrably in the same order given:

- Install Database Server(SQL Server or Oracle)
- Install BEA Weblogic
- Install Tuxedo
- Install PeopleTools
- Install Application(HRMS/Finance/CRM)
- Create a Database and run the Datamover import scripts
- Intall PIA
- Configure Webserver and Process Scheduler Services

It is not possible to explain each process in details or if anyone has any specific questions or would require any help in PeopleSoft installation feel free to mail me at rahulrajuhex@gmail.com or call me at 0091 9962010025.

Thanks
Rahul
